

# WHOLE BRAIN TEACHING

# Welcome **SMARTS** Teachers

Today we are going to explore Whole Brain Teaching, a creative way to engage your class while delivering effective instruction to promote student growth and positive classroom behavior.

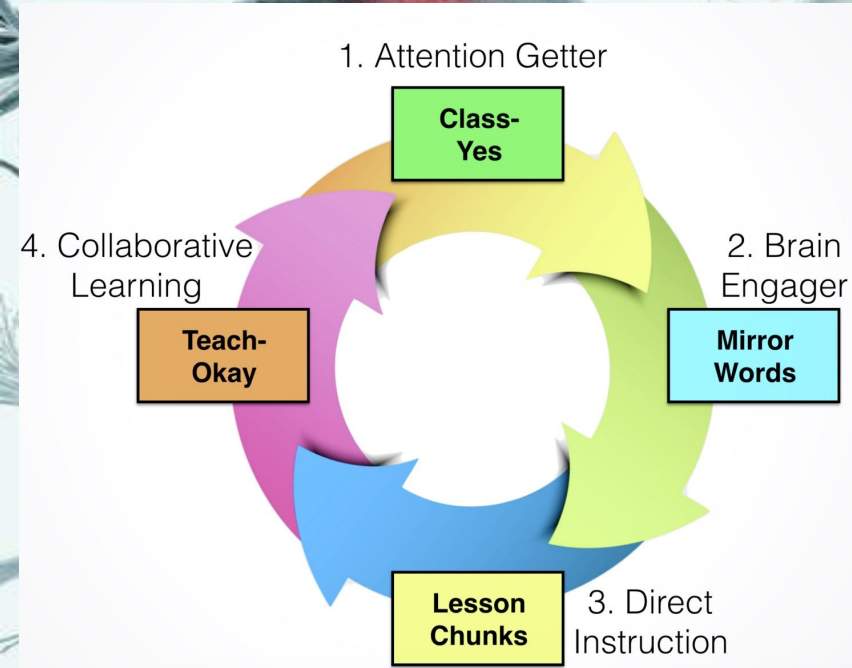

# Whole Brain Teaching: Delivering a lesson by cycling teaching patterns, over and over.

*Begin by establishing classroom expectations reinforced by a reward system.*

- Start with the Attention Getter (Class-Yes). You can't teach if you don't have your students' attention.
- Activate the Brain Engager (Mirror Words). Choose how you will deliver content: big gestures, tiny gestures, fast gestures, slow motion, etc. The variations are endless!
- Speak using gestures for about one minute of Direct Instruction, talking only about one new point. Breaking your lesson into Lesson Chunks means you only present one new point at a time. When combined with the next step in the cycle, you ensure students understand this one new point before moving on to the next.
- Employ Collaborative Learning (Teach Ok) as students teach their neighbor your lesson using gestures. You will move through the classroom during this, assessing if your pupils are ready for a new lesson chunk or need to review.

Start with the **Attention Getter** (Class-Yes). You can't teach if you don't have your students' attention

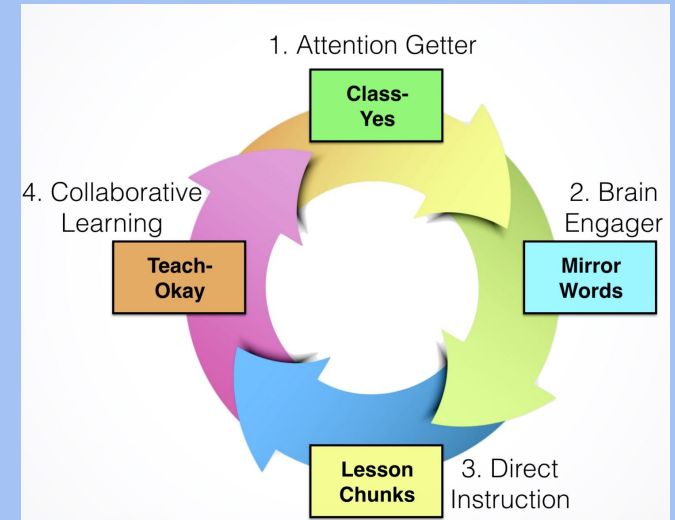

Activate the **Brain Engager** (Mirror Words). Choose how you will deliver content: big gestures, tiny gestures, fast gestures, slow motion, etc. The variations are endless!

### **Two Types of Gestures:**

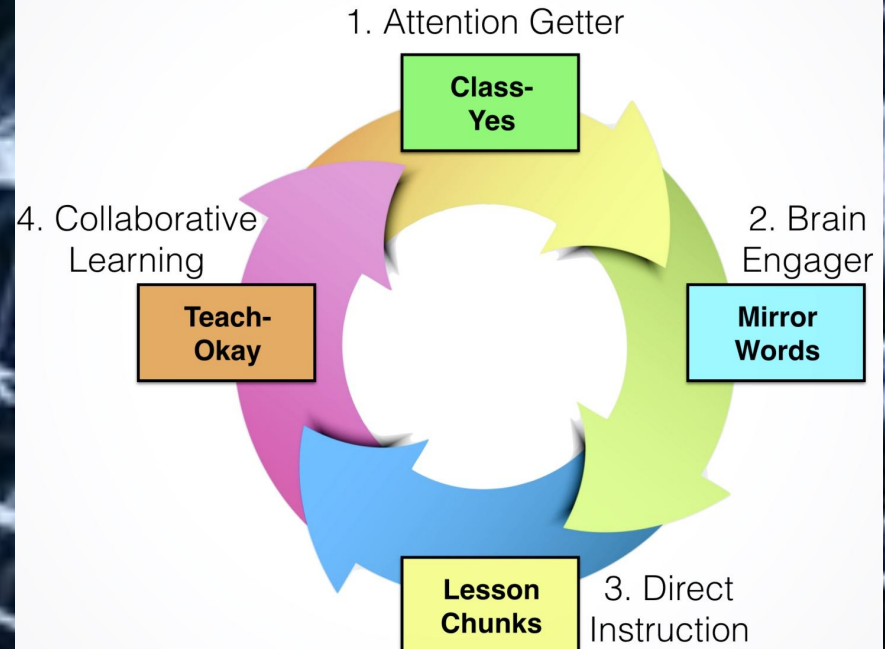

1. Social gestures- talking with your hands, made up as you go.
2. Memory gestures- connect directly to content.

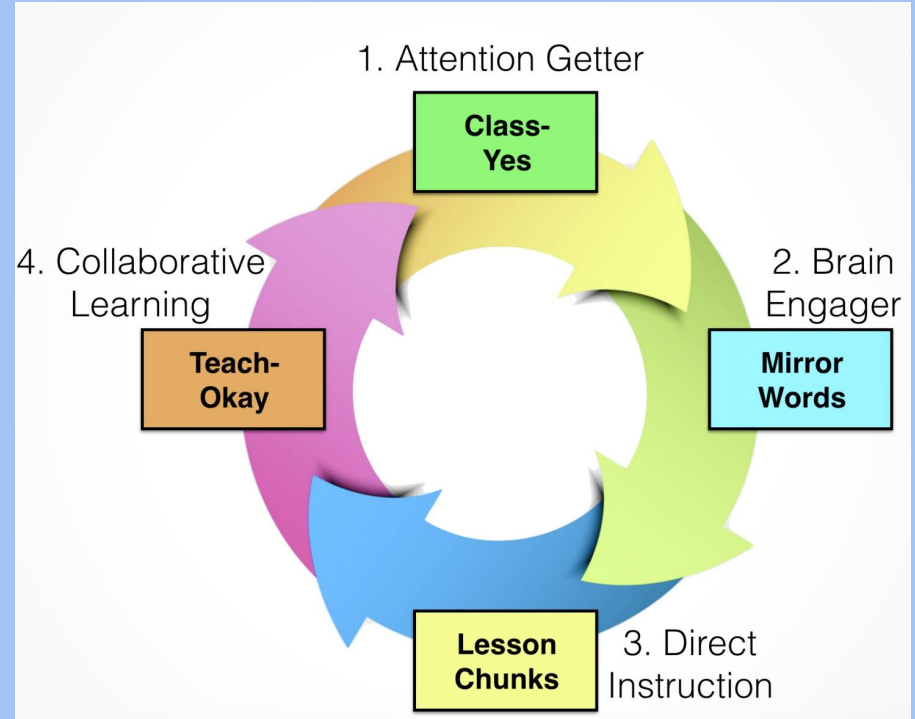

# Breaking your lesson into Lesson Chunks

Present your lesson by selecting one point at a time. Be precise and keep it short. The more you talk the more you lose the students attention.

# Collaborative Learning (Teach Ok) as students teach their neighbor your lesson using gestures.

This is a helpful means of insuring that students are retaining the lesson points. Children are much more inclined to listen to their peers than an adult.

# WHOLE BRAIN TEACHING

- *Set up classroom expectations.*
- *Change up your delivery of attention getters.*
- *Be prepared and concise with your lessons.*
- *Repetition equals learning.*
- *Deliver your lesson in small chunks.*
- *Establish a reward system.*

# RESOURCES FOR WBT

The information within this presentation was derived from these two sources and my personal class experiences.
